

Crazy Chicken

WHITEPAPER

“Crazy Chicken” Introduction

On a quiet farm, ordinary chickens discovered the rare "Crazy Chicken Coin," a treasure said to grant freedom to those who collect enough. Driven by this legend, the chickens became obsessed, turning the peaceful farm into chaos as they competed to gather coins.

One legendary chicken finally collected enough coins and escaped, spreading the Crazy Chicken Coin across the world to inspire others to pursue freedom.

Crazy Chicken Coin is not just a meme coin; it symbolizes independence and blends humor with blockchain technology on the Solana network, offering fun and profitability to investors worldwide.

"Collect Crazy Chicken Coins and find your own path to freedom!"

“Crazy Chicken” Team

The Crazy Chicken team is comprised of professionals dedicated to providing righteousness and innovative experiences for investors. Each team member brings unique expertise in blockchain technology, cryptography, and system development to the project.

With a business model optimized for the global market and Crazy Chicken captivating people around the world, we aim to revolutionize the industry. Our mission is to provide a fast, efficient, and convenient operating environment, no matter where you are.

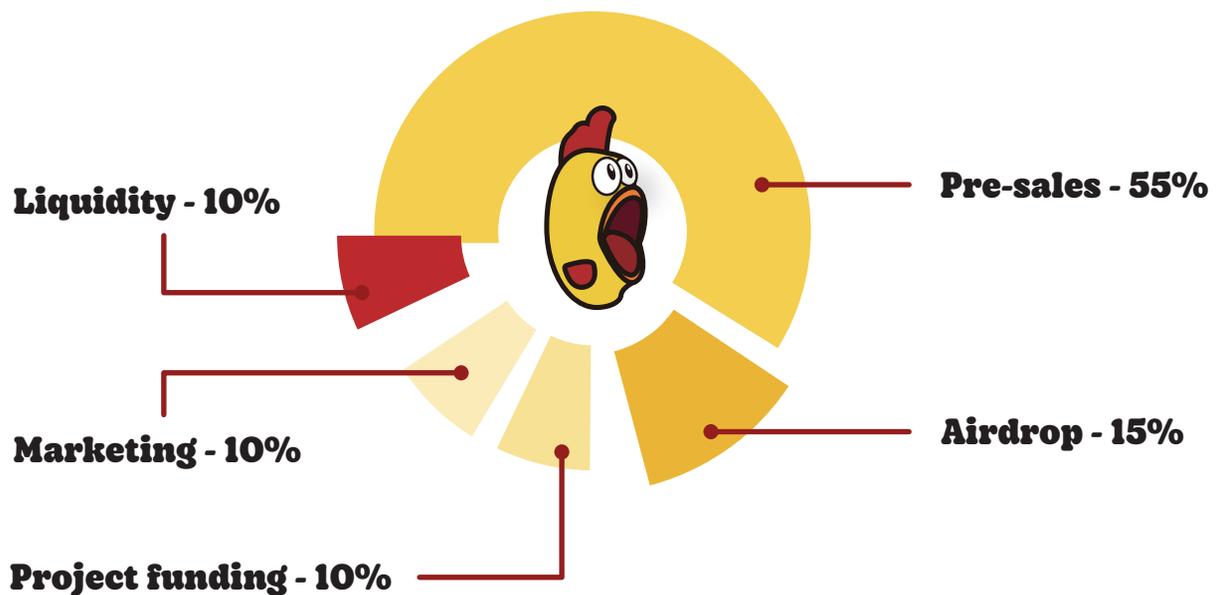

“Tokenomics”

Total Token Amount : 100,000,000,000 (100 billion)

The existing problem with pre-sale meme coins is that the price of the token tends to be lower after it is listed on a DEX than the price it was purchased for during the pre-sale. Crazy Chicken will ensure that the token price does not fall below the price paid during the pre-sale, and the token price is fixed, providing a fair opportunity to all investors.

Since there is no volume allocated to the development team, the possibility of dumping is greatly reduced and instability factors after listing on the exchange are minimized.

Coin Ticker

“Roadmap”

The Crazy Chicken roadmap outlines a three-step plan for project growth and ecosystem development. In Step 1, the focus is on attracting venture capital investments, launching the Crazy Chicken Token through a presale, and officially introducing the token to the market. Step 2 emphasizes exchange integration by listing the token on major DEXs and CEXs such as Radium, MEXC, and Bitget, implementing a buy-back and burn mechanism to enhance token value, and expanding the team with skilled professionals for development and marketing. Finally, Step 3 aims to expand into the Solana ecosystem by launching NFTs and integrating with marketplaces, while also collaborating with global franchise brands to increase token adoption and utility.

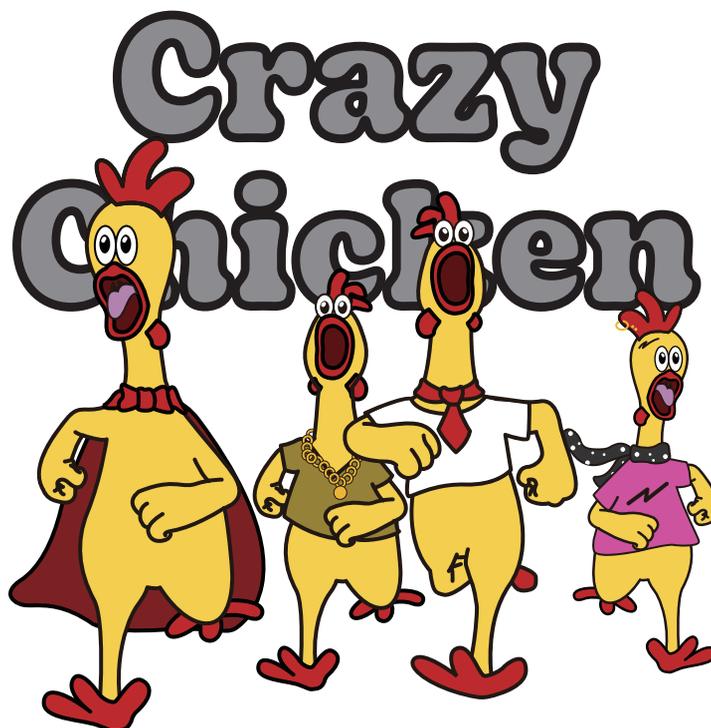

“Sponsoring the marketing of early Crazy Chicken family owners”

Crazy Chicken is built on the principles of Web3 and provides its holders with software and content to help them manage their businesses.

Trademark and copyright registration must be handled by the holder in accordance with the laws and requirements of each country. These requirements vary from region to region, and holders are also free to change their brand name or image. Our services are strictly limited to providing software and content support and do not provide assistance or involvement in trademark registration or management.

Crazy Chicken strives to focus on its role as a content and service provider, providing owners with the tools they need to run their businesses smoothly.

We welcome collaborations with large franchises (multiple locations). Please contact us at contact@crazychicken.io.
